

GET GROUP CORPORATE BRIEF

ABOUT GET GROUP

For more than 35 years, GET Group has established a global reputation as a leading provider of end-to-end solutions for identity management, AI-powered digital transformation, safe and smart cities, and commercial card printing. Using state-of-the-art security systems, hardware, and software applications, GET Group provides institutions, enterprises and more than 50 governments worldwide with highly secure and durable travel and identification documents, business process automation, digital customer experience, law enforcement intelligence, and integrated physical security systems.

Having been awarded the prestigious CMMI Level 5 international quality certification, the ISO 9001 standard for quality management, and the ISO 27001 standard for information security, GET Group provides its clients in the public and private sectors with a suite of customizable, integrated and reliable solutions, such as Passport and ID personalization, Robotic Process Automation, Chatbot, Intelligent Workflow Management, Queue Management, Happiness Meter, Smart Patrol, Premises Security and Surveillance, Electronic Billing and Payment, Electronic Toll Collection, Medical Claims Management, and Customs Management. In addition, GET Group's line of commercial card printers 'Heidi' continues to empower many industries and sectors with unique printing capabilities and various personalization options at a low cost-per-card.

GET Group's pioneering solutions, technological expertise, and wide integration capabilities help public sector organizations and private enterprises manage and optimize their processes and performance, thus providing them with a competitive advantage, synergies across their processes, and higher returns on operational investment.

COUNTRY REPRESENTATION

GET Group currently has 10 Country Representation offices in United Arab Emirates, United States of America, Canada, Colombia, Egypt, Kingdom of Saudi Arabia, Lebanon, Qatar, China, and Syria. More offices are expected to open in new locations in affirmation of GET Group's policy of expanding its reach and geographical footprint. These branch subsidiaries were established to build continuous local market knowledge and customer relations, to develop relevant innovative products and solutions, and to maintain high quality after-sales support.

IDENTITY MANAGEMENT

GET Group's Identity Management solutions have been used by many governments around the world for the personalization and secure issuance of hundreds of millions of high-assurance documents, including passports, identity cards, driving licenses, voter registration cards, and other government-issued credentials. GET Group's global reputation as a trusted partner of governments and a provider of end-to-end solutions have enabled it to implement national identity programs, producing highly secure and durable documents in compliance with international standards and conventions.

Personalization Solutions

GET Group's personalization printers cover the full lifecycle of security document printing, personalization and issuance. This includes ePassport and eID personalization printers that issue documents according to the highest international standards of printing quality, document durability and security.

ePassport Personalization

GET Group's ePassport printers offer various personalization and printing options that enable authorities around the world to issue highly secure and durable documents.

The eP600 ePassport thermal retransfer passport personalization solution exclusively available from GET Group incorporates high-resolution printing of 600dpi using solid pigment ink ribbons, innovative retransfer printing and multi-layer security features. The solution supports the personalization of paper and polycarbonate datapages.

Combining the advanced thermal retransfer printing of eP600 with the convenience of the C6900 inkjet printer, eP600Plus emerges as the most advanced ePassport personalization solution combining two different printing technologies.

Secure ID Personalization

Using GET Group's Secure ID Personalization solutions, security-conscious governments can design, personalize, laminate and laser-engrave cards for various high-security reasons within integrated and reliable mechanisms.

CP500
TOPPAN

The CP500 secure ID personalization solution delivers a printing quality of 600dpi using solid pigment inks and reverse retransfer printing, leveraging GET Group's long experience in implementing secure credentials issuance programs. The solution is available with complex security features, such as RVI+.

CP500LE

The CP500LE is an integrated solution that combines the advanced printing of the CP500 secure ID personalization solution with laser engraving capabilities in a compact and lightweight design, producing secure color polycarbonate cards with laser-engraved security features such as CLI, MLI and clear window.

CLM-50

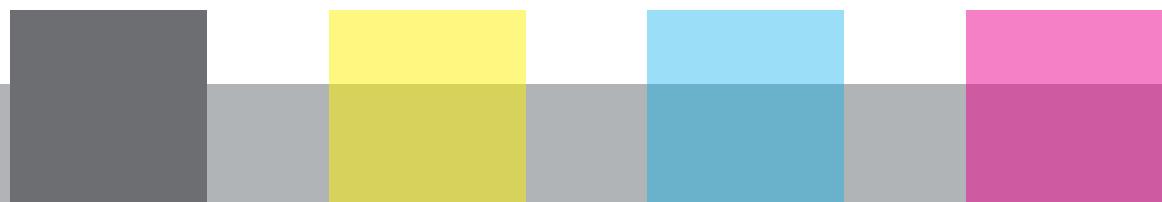

The CLM-50 card laser engraving system is available as a standalone unit for single- or dual-side laser engraving of ID cards. It is ideal for the issuance of government credentials such as national identification cards, border crossing cards, and driver licenses. The CLM-50 delivers excellent laser engraving capabilities in a compact design, and is optionally available with complex security features such as MLI/CLI, smart card encoding, among other features.

CP500CL

The CP500CL is an integration between the CP500 ID personalization solution and advanced lamination units to create secure and accurate hologram registration. The solution adds an extra-secure, ultra-thin film to protect cards against alteration attempts and physical wear.

Secure Document Issuance & Management

GET Group offers a wide range of solutions for credential, identity and access management, covering such aspects as document design, biometrics capture management, and verification. In addition, GET Group pioneers the digital identity industry with mobile-based credentials encrypted using internationally certified algorithms.

GET SDIS is a comprehensive, end-to-end solution designed to manage, automate and facilitate the production of secure government-issued documents. The solution conforms to the complex security and durability requirements outlined by governments and international organizations for the production of ePassports and eID cards.

GET Identity software is a simple, reliable and tool-rich card personalization system developed to assist public and private institutions in card issuance at various level of security and complexity; such as student and employee ID cards, access cards, loyalty programs and insurance cards.

GET Mobile ID (mID) provides high assurance identity on a user's mobile device. GET mID fully supports ISO 18013-5 so that citizens can use their ID everywhere – at points of sale, for fast entry into establishments and premises, at the roadside, and across borders. GET mID utilizes formidable data encryption algorithms and communication security to combat fraud, reduce identity theft, and allow interoperability while putting the citizen in order of their ID.

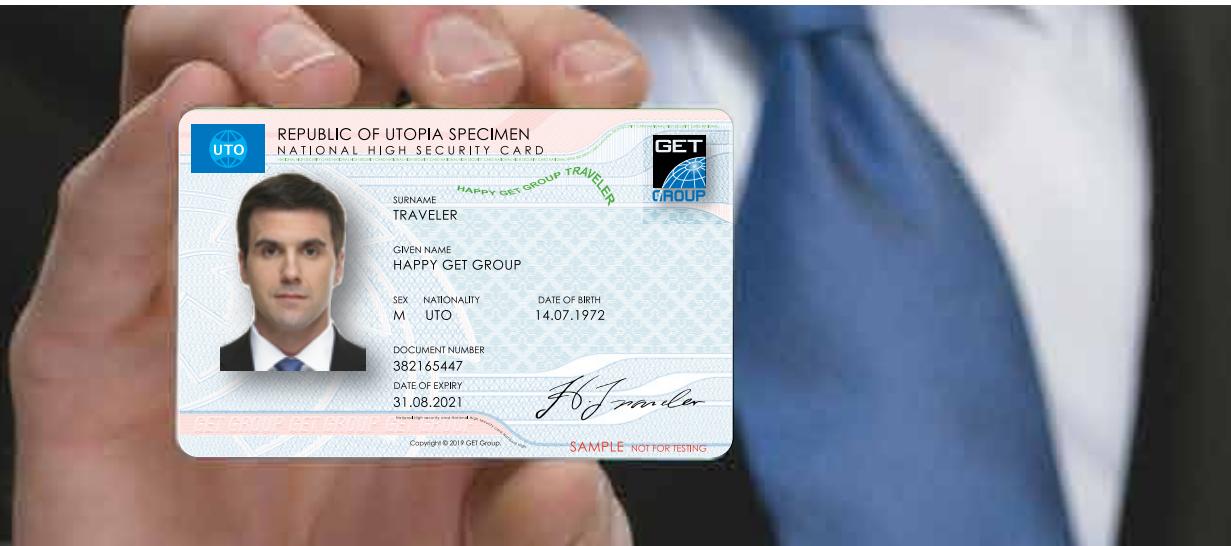

The eCabinet is an automated system for storing and dispensing Passport and ID documents. The system incorporates automated document recognition during the check-in process, and an intelligent check-out process including user identification, biometrics verification, document retrieval, and dispensing.

National Registration

Addressing the critical logistics of security document issuance programs, GET Group has developed solutions that simplify, consolidate and manage citizen enrollment and document issuance operations across multiple sites, while maintaining the quality, consistency and security of issued documents.

eNational ID

GET Group's eNational ID merges the latest identification technologies and field skills along with smart card and biometric technologies within an integrated National ID platform.

Portable Enrollment System

PORTABLE ENROLLMENT SYSTEM

The Portable Enrollment System enables governments to accurately capture and register citizen biometrics and biographical data at remote locations irrespective of the availability of supporting infrastructure. The solution can be easily customized to incorporate features and devices based on project requirements.

GET Enroll

GET Enroll is an intuitive and user-focused web application developed for the management of the biometrics and biographical data registration process. The software can be used by enrollment offices and portable enrollment kits to manage enrollment operations.

Driving License & Vehicle Registration

Traffic police departments and governments benefit from a combination of advanced software and hardware components that cover the full-cycle of driving license and vehicle registration issuance.

eDLVR

GET eLDVR is a web-based and modular solution designed to consolidate and simplify the various processes involved in vehicle registration and the issuance of driving licenses. It empowers traffic police departments with an intelligent and secure mechanism that supports online registration and enrollment. The solution is additionally available with a mobile application that can be published under the government's eService platform.

Visa and Border Control Management

GET Group's ePass is a fully integrated system consisting of separate modules working collectively to enhance border security and process ID and travel documents with great efficiency.

ePass

GET Group's ePass is a fully integrated system that consists of separate modules working harmoniously to enhance border security, enforce border control measures and process ID and travel documents with great efficiency. The solution can seamlessly integrate with third-party Identity Document Libraries to support the document verification process.

Vi1200

GET Group's Vi1200 is a highly secure and ICAO-compliant visa and document personalization solution. The system personalizes visa-sized sheets as well as A4 and A5 documents using innovative printing techniques developed by Hewlett Packard (HP), offering advanced document personalization capabilities and complex document security standards for a wide range of official purposes.

DIGITAL TRANSFORMATION

GET Group leverages its collective expertise and strong partnerships with multiple technology innovators toward digitally transforming and automating the operations of enterprises and government agencies.

GET Group empowers its clients with innovative solutions that help them achieve a substantial increase in productivity and efficiency while optimizing operational costs, enhancing customer experience, and increasing customer satisfaction and retention.

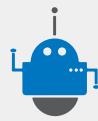

Process Automation and AI

GET Group utilizes virtual robots, artificial intelligence and machine-learning technologies to handle high-volume and rules-based enterprise tasks that require human intervention, enabling human resources to work better, smarter, and more creatively on high-value tasks. The automation and robotics solutions developed by GET Group and its partners enable enterprises and public institutions to fully realize the potential of technology as well as existing assets.

Robotic Process Automation

Robotic Process Automation (RPA) utilizes software robots, artificial intelligence (AI), and machine learning to automate high-volume and rules-based enterprise tasks, enabling human resources to work on high-value tasks that require complex decision making and human intervention. RPA accesses and interacts with systems, communicates across platforms, captures data and manipulates applications.

Intelligent Process Automation

Intelligent Process Automation is a powerful business process management platform developed to create, discover, archive and manage unstructured content, allowing users to access documents and electronic forms, and make business decisions.

Digital Customer Experience

GET Group strives to provide innovative and the most advanced solutions to its clients focusing on their main challenge, enhance customer journey which will result in increasing customer satisfaction and retention. GET Group with its vast experience offers a bundle of solutions to increase productivity, better decision making and increase employee as well as customer engagement.

GET Queue Management System

GET Queue Management System enriches customer experience at key touchpoints and service branches. The solution empowers organizations and enterprises with full-fledged, turnkey and customer-centric tools to effectively measure, manage and organize customer queues and streamline customer flow within linear and virtual queuing models.

GET Happiness Meter

GET Happiness Meter is an innovative solution that enables service providers and government entities to measure people's happiness and satisfaction in real-time through the detection of micro-vibrations and facial expressions.

Chatbot

The Chatbot software uses artificial intelligence to engage in conversations with customers in natural language. Our chatbots do not simply offer keyword-triggered responses; but are equipped with inbuilt knowledge of sentence structure and complex expression, thus capable of recognizing patterns, understanding intent, identifying customer queries, and resolving them. Our chatbots can be integrated with different applications and channels.

Business Solutions

GET Group, with its niche enterprise and legacy solutions, have developed a long-lasting presence among governments and private institutions all over the world. GET Group continues to invest heavily on these solutions by incorporating the most secure and innovative methodologies with the purpose to effectively manage and overpass its clients concerns and challenges.

GET Prepaid

GET Prepaid eliminates the use of cash and cheques. It is an open, modular, and scalable system that uses internationally certified cryptography algorithms and protects customers from fraudulent activities.

GET Medical Claims Management

GET Medical Claims Management automates the availing of healthcare related benefits and claims management, through a reliable and secure platform that connects insurance payers, healthcare providers and patients

GET Customs Management (ADVANCE®)

Automated Documentation and Valuation of Customs Entries (ADVANCE®) is an integrated and modular solution designed to streamline and facilitate customs processes through a unified platform compliant with international standards and conventions.

GET Electronic Bill Presentment and Payment

GET Electronic Bill Presentment and Payment securely connects billers to payers. It provides billers with a fast and cost-effective revenue collection platform, and payers with a wide range of convenient channels and payment methods.

GET Time & Attendance

GET Time & Attendance is a robust system that registers employee attendance in real-time through a range of biometric, smart card and PIN-based terminals. Its seamless integration with ERP, Payroll and other third-party systems facilitates various HR and administrative functions.

SAFE AND SMART CITIES

Through decades of collaboration with the public and private sectors, GET Group has developed a keen understanding of the various security threats that face governments, as well as the technical, operational and budgetary challenges that complicate the pursuit of reliable security systems that help protect citizens, assets, infrastructure and borders.

GET Group has thus developed its Safe and Smart Cities solutions, addressing an expanded range of security and management issues in urban and rural environments, and empowering governments with scalable, customizable and easily integrated solutions that assist in the critical functions of law enforcement, surveillance, access control, traffic management and asset control.

Law Enforcement Intelligence

GET Group combines the latest state-of-the-art security-related solutions to serve law enforcement agencies with a purpose to control the growing threats around the world and improve the safety of the community.

Powered by AI and machine learning capabilities, GET Group incorporates the most advanced market-leading mobile ANPR, 360 degrees surveillance, speed detection, facial recognition and body-worn cameras all-in-one single solution design.

Smart Patrol

Smart Patrol is an integrated, modular and scalable solution designed to assist and empower law enforcement agencies in surveillance and crime prevention efforts. The solution's single design incorporates advanced, market-leading Automatic Plate Number Recognition cameras, 360 degrees surveillance, facial recognition, speed detection, and innovative software.

WatchGuard

Serving Law Enforcement for decades, GET Group has signed an exclusive partnership agreement with WatchGuard, the leading provider of mobile video solutions for law enforcement, to cover the Middle East region. The solution comprises state-of-the-art body-worn cameras, in-vehicle video surveillance, and evidence management solutions.

Premises Security

GET Group, the leader in security solutions, guarantee reliable security, round-the-clock surveillance, and access control, as well as asset and personnel monitoring and control. The systems' components were carefully designed to cover all security requirements with the most stringent industry standards. GET Group works diligently and hand in hand with an extensive network of industry experts, thus guaranteeing software and hardware compatibility without altering on the quality.

GET Community ID

GET Community ID is an integrated one-token solution that addresses a wide range of critical functions and processes within organizations, including securing premises and structures, managing people and vehicle access, electronic payment, and monitoring time and attendance.

GET Access Control

GET Access Control is a powerful system built to effectively control and secure facilities without compromising freedom of movement for either vehicles or individuals. The system is designed to fit the requirements of organizations of various sizes, and it is ideal for the enforcement of access control measures at a single site or multiple regions for existing facilities and recently constructed premises.

GET Intelligent Key and Asset Management

GET Intelligent Key and Asset Management provides law enforcement agencies as well as public and private institutions with the ability to secure, manage and audit the movement of keys, valuable equipment, and weapons.

GET Video Surveillance

An intelligent centralized monitoring system that controls and manages a full CCTV solution integrated with video analytics, facial recognition, and intrusion detection. With the advancement of technology, GET Group has expanded its focus not only to capture and record incidents but also to study and analyze behavior.

Intelligent Transportation Systems

GET Group's ITS solutions are built upon leading technologies to increase the safety on highways, improve road security, reduce traffic congestion, and protect road infrastructure.

This suite of solutions sets the foundation for a fully integrated intelligent transportation system combining advanced hardware and innovative software through robust communication channels, thus establishing a platform to save lives and protect investment, energy and the environment.

GET Automatic Vehicle Identification System

Leveraging a combination of advanced software and hardware for immediate vehicle identification and detection at key locations, the system uses Automatic Number Plate Recognition and long-range RFID technologies to remotely identify vehicles regardless of their traveling speed. Data retrieved is analyzed and used for various security, field intelligence and road tolling applications.

GET Electronic Toll Collection

A full-fledged solution designed to address the need for better utilization of road infrastructure and the reduction of traffic congestions. The system provides an advanced and cost-effective solution for road charging by incorporating a range of state-of-the-art tolling technologies addressing diverse user needs.

COMMERCIAL CARD PRINTING

Heidi is a product line by GET Group launched to assist public and private sector organizations in card issuance and credential management. The Heidi line boasts advanced card-printing features covering the personalization and encoding of various card types in a cost-effective manner, thus leveraging GET Group's expertise in the security printing and document issuance fields.

• CP55-S

SINGLE SIDE

• CP55-D

DUAL SIDE

CP55

Heidi CP55 is a high-speed direct-to-card printer built to deliver innovative imaging and excellent printing quality at a competitive cost-per-card. It is a highly adaptable solution designed to serve many sectors within various user environments and card-issuance operations. Heidi CP55 is available in two models; CP55-S and CP55-D for single- and dual-side printing, and provides multiple options for protection against card tampering and fraud attempts with various personalization and encoding options. It supports the secure global EMV standard, ensuring the cards are interoperable with the global payment infrastructure.

CP55-K

A high-capacity, easy-service card printer in a compact design suitable for various self-service kiosk applications. CP55-K supports multiple card types and is designed to fit into various types of self-service kiosks.
